DETAILED ACTION

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on July 3, 2006, has been entered.

Claims 1-41 and 43-60 are canceled. Claims 42 and 61-66 are pending.

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 42 and 61-64, drawn to a process for treating/reducing fibroses comprising the administration of a pharmaceutical composition which comprises at least one biocompatible polymer of the general formula $A_aX_xY_y$, classified in class 514, subclass 1.
- II. Claims 65 and 66, drawn to a process for treating fibroses comprising the administration of a pharmaceutical composition which comprises at least one biocompatible polymer of the general formula $A_aX_xY_yZ_z$, classified in class 514, subclass 1.

The inventions are distinct, each from the other because of the following reasons:

Although there are no provisions under the section for "Relationship of Inventions" in M.P.E.P. § 806.05 for inventive groups that are directed to different methods, restriction is

Art Unit: 1651

deemed to be proper because these methods appear to constitute patentably distinct inventions for the following reasons: Groups I and II are directed to methods that are distinct both physically and functionally, and are not required one for the other. While both groups are processes of treating fibroses, both groups differ in that they treat fibroses using different pharmaceutical compositions. The biocompatible polymers contained in the pharmaceutical compositions are different in that they have different general formulas. Therefore, a search and examination of both methods in one patent application would result in an undue burden, since the searches for the methods are not co-extensive, the classification is different, and the subject matter is divergent.

Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions have acquired a separate status in the art due to their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
